

Gist Artifacts

The logo, colours, type and usage rules for Gist Artifacts: shareable pages from your AI agent, stored in your own GitHub Gists.

THE MARK

One stroke and a point

One stroke draws a page and a G, and stops at a point. The page is what an agent makes, the G is where it is kept, and the point is the gist.

A page

The stroke starts at the folded corner and follows the outline of a sheet.

A G

It turns inward before closing, so the sheet is also the initial of Gist.

Open

The outline never closes. The format is open: anyone can write an artifact, or display one.

The point

Where the stroke ends. The gist of something is its point, and here it is highlighted.

HOW IT IS DRAWN

1 A sheet with a folded corner, as every file icon draws it.

2 The outline opens below the fold and turns inward. It is now a G.

3 The stroke ends at a point, on the vertical axis of the sheet.

Sheet	54 × 70 units, measured on the centre line of the stroke
Stroke	8.5 units, with round ends and joins
Corners	radius 10; the fold cuts 18 units off two edges, at 45°
Point	two strokes wide, centred on the end of the stroke

VERSIONS

Mark and name

The wordmark is Geist Semibold. Its capitals are centred on the mark and stand 0.36 of its height; the gap between them is one fifth of the mark's height.

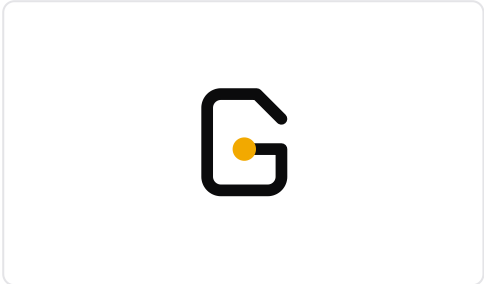

Horizontal. The default logo, for headers and READMEs.
`logo/gist-artifacts-lockup.svg`

On dark grounds.
`logo/gist-artifacts-lockup-dark.svg`

Stacked. For square spaces.
`logo/gist-artifacts-lockup-stacked.svg`

Mark. 32 px and up.
`logo/gist-artifacts-mark.svg`

Compact mark. 24 px and below.
`logo/gist-artifacts-compact.svg`

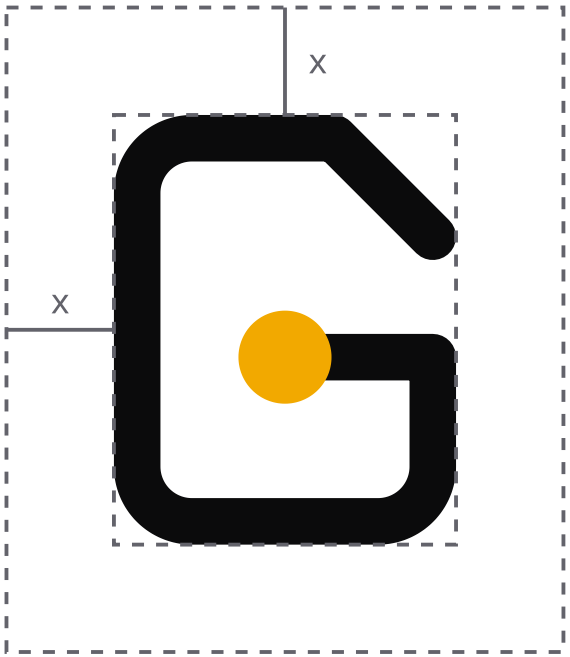

One colour. Takes the text colour.
`logo/gist-artifacts-mark-mono.svg`

SPACE AND SIZE

Room to breathe, two drawings

Below 32 px the stroke of the mark gets thin, so small sizes use a second, heavier drawing whose edges land on whole pixels at 16 px.

Keep clear space of **x**, one quarter of the mark's height, on every side of the mark and of the logo. Nothing else enters it: no text, no edge, no other logo.

MINIMUM SIZE	SCREEN	PRINT
Mark	32 px tall	9 mm tall
Compact mark	16 to 24 px	below 9 mm
Horizontal logo	24 px tall	7 mm tall
Stacked logo	64 px tall	18 mm tall

Print sizes are the screen sizes at 96 dpi, rounded up. Below 24 px, show the compact mark alone and write the name in text.

Compact at 16, 20 and 24 px; the mark from 32 px, at true pixel size.

COLOUR

Ink, Paper and one marker

The palette is black, white and three greys. Marker is the only colour, and it does the one thing a highlighter does.

ON LIGHT GROUNDS

Ink
#0B0B0C
--ga-light-ink
The stroke, the wordmark and text.

Marker
#F2A900
--ga-light-marker
The point in the mark, and a highlight behind Ink text. Never the colour of text, never a large area.

Ground
#FFFFFF
--ga-light-ground
Preferred light ground. Paper.

Wash
#F4F4F5
--ga-light-wash
Quiet surfaces: sidebars, code blocks, hovered rows.

Rule
#E4E4E7
--ga-light-rule
Hairlines and borders.

Graphite
#63636B
--ga-light-graphite
Secondary text.

ON DARK GROUNDS

Ink
#F4F4F5
--ga-dark-ink
The stroke, the wordmark and text.

Marker
#FFB81C
--ga-dark-marker
The point in the mark, and a highlight behind dark text. Lifted for dark grounds.

Ground
#0B0B0C
--ga-dark-ground
Preferred dark ground. The light scheme's Ink.

Wash
#18181B
--ga-dark-wash
Quiet surfaces: cards, sidebars, code blocks.

Rule
#27272A
--ga-dark-rule
Hairlines, borders and hovered rows.

Graphite
#A1A1AA
--ga-dark-graphite
Secondary text.

USING MARKER

- Marker has two uses: the point in the mark, and a highlight behind dark text.
- It is never the colour of text, and never fills a large area.
- Highlight a phrase, not a paragraph. One per screen is usually enough.
- Everything else is Ink, Graphite and the three neutrals.

An artifact is a Gist you own.

LEGIBILITY

TEXT PAIR	CONTRAST
Ink on Ground	19.7 : 1
Graphite on Ground	6.0 : 1
Graphite on Wash	5.4 : 1
Ink on Marker	9.8 : 1
Ink on Ground, dark	17.9 : 1
Graphite on Wash, dark	6.9 : 1
Dark text on Marker, dark	11.4 : 1

TYPE

One family

Geist for everything that is read, Geist Mono for everything that is typed.

Geist Semibold
The wordmark and headings, tracked in by 3%

Shareable pages from your agent

Geist Regular and Medium
Text and interface

Every update is a new revision, and nobody needs an account to view it.
Medium marks a label or a name.

Geist Mono
Code, file names, revisions and identifiers

```
gist-artifacts publish ./out --title "Cosmology Explorer"
```

- Sentence case everywhere: headings, buttons and labels.
- Set numbers that line up in columns with tabular figures.
- Two weights on a screen are usually enough: Regular with Semibold, or Regular with Medium.
- Small labels in Geist Mono may be upper case, spaced out by 8%.

Geist and Geist Mono are in `fonts/` under the SIL Open Font License, and on Google Fonts. The wordmark in the logo files is outlined, so they need no font installed.

USAGE

Do and don't

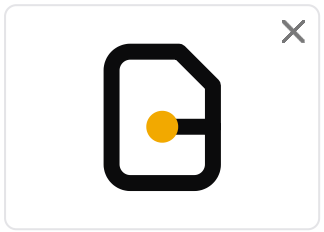

DO

- Use the light versions on light grounds and the dark versions on dark grounds.
- Use the one-colour mark for single-colour printing, on photographs, and where a page sets its own colours.
- Keep clear space of a quarter of the mark's height on every side.
- At 24 px and below, use the compact mark.

THE NAME

- Write **Gist Artifacts**, two words with capitals, for the project and the format.
- One of them is **an artifact**, in lower case. **Gist** keeps its capital: it is GitHub's name for the thing an artifact is stored in.
- `gist-artifacts` is for code: the plugin, the tool and its commands.

DON'T

Don't close the outline
The opening is what makes the sheet a G, and what says the format is open.

Don't recolour the point
The point is Marker, or the same colour as the stroke in the one-colour version.

Don't move the point
It sits on the end of the stroke, on the axis of the sheet.

Don't use the mark as a letter
The mark stands beside the name. It never replaces its first letter.

Don't stretch or skew
Scale the mark and the logo only in proportion.

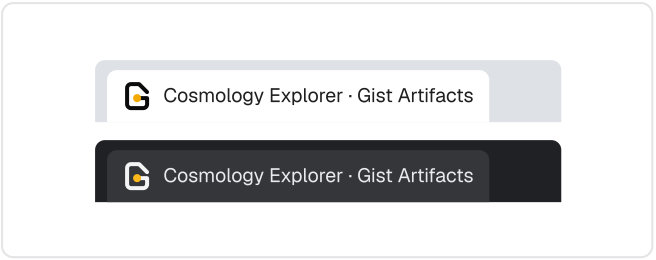

Don't use the light version on a dark ground
Use the dark version, or the one-colour mark in a light colour.

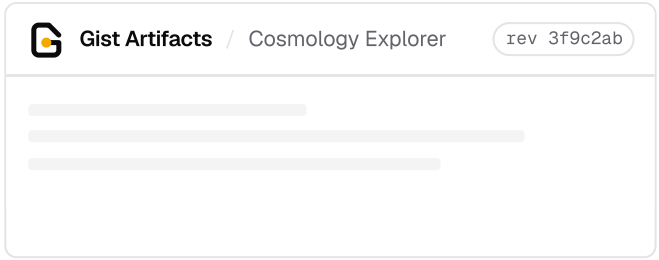

Never add shadows, glows, gradients or outlines; never rotate the mark; never rebuild the wordmark in another typeface; and never set the mark beside GitHub's logos in a way that suggests the project is GitHub's.

IN USE

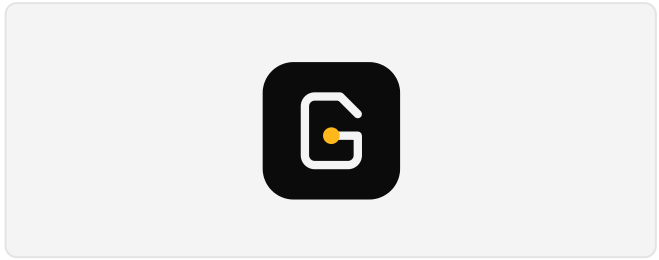

Where it appears

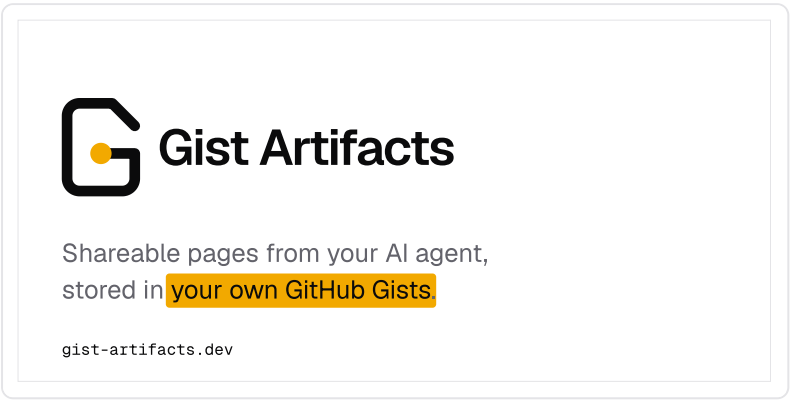

Browser tab. The favicon follows the browser's colour scheme.

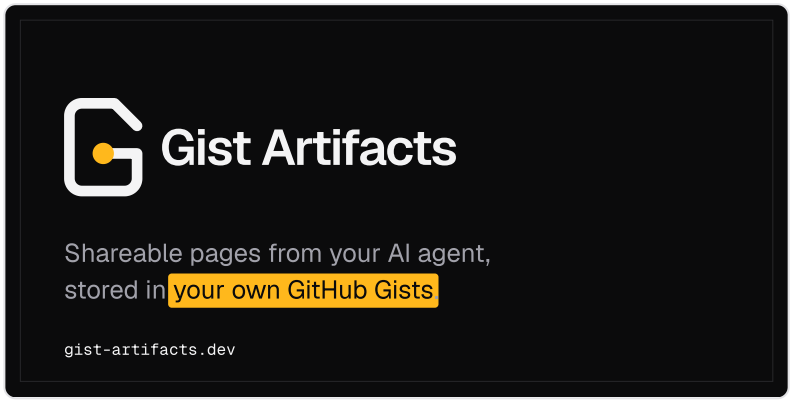

Viewer header. The compact mark at 20 px, the name in Geist Semibold.

Application icon. The mark reversed on an Ink tile, for home screens and avatars.

Social preview, 1280 × 640. One phrase under the marker.

The same card on a dark ground.

FILES

The kit

Everything is in the `brand` folder of github.com/EiffL/artifacts.

`logo/gist-artifacts-lockup.svg · -dark`	Horizontal logo. The default.
`logo/gist-artifacts-lockup-stacked.svg · -dark`	Stacked logo, for square spaces.
`logo/gist-artifacts-mark.svg · -dark · -mono`	The mark alone, 32 px and up. Mono uses `currentColor`.
`logo/gist-artifacts-compact.svg · -dark · -mono`	The compact mark, 24 px and below.
`logo/png/`	Transparent 2× PNG copies of the logos.
`icons/favicon.svg · favicon.ico · favicon-16/32/48.png`	Favicons. The SVG follows the browser's colour scheme.
`icons/app-icon.svg · icon-512.png · icon-256.png`	Application icon, with rounded corners.
`icons/apple-touch-icon.png · avatar-500.png`	Square icons for platforms that mask them: home screens, avatars.
`social/gist-artifacts-social-card.svg · -dark · PNG`	GitHub social preview and Open Graph image, 1280 × 640.
`tokens/colors.json · colors.css`	The colours as design tokens and CSS custom properties.
`fonts/`	Geist and Geist Mono, with their licences.

FAVICONS IN A WEB PAGE

```
<link rel="icon" href="/favicon.ico" sizes="48x48">
<link rel="icon" href="/favicon.svg" type="image/svg+xml">
<link rel="apple-touch-icon" href="/apple-touch-icon.png">
```

LOGO IN A GITHUB README, FOLLOWING THE READER'S THEME

```
<picture>
  <source media="(prefers-color-scheme: dark)"
          srcset="brand/logo/gist-artifacts-lockup-dark.svg">
  <img alt="Gist Artifacts" width="320"
       src="brand/logo/gist-artifacts-lockup.svg">
</picture>
```

Every SVG is transparent, uses only brand colours, carries a title and a description for screen readers, and keeps its ids unique so several can be inlined in one page. All of it is generated: change `tokens/colors.json` or `tools/build_logo.py` and rebuild.
